Manuel d'instructions

Manual de instrucciones

Model # is located by barcode.
Please write your model # on your sales receipt or below.

Le numéro de modèle se trouve à côté du code-barres.
Veuillez inscrire le numéro de modèle sur votre reçu de vente ou ci-dessous.

El número de modelo está ubicado al lado del código de barras.
Sirvase escribir el número de modelo en el recibo de compra o debajo.

Model Number:
FN 20018344-F AB

INSTALLATION

ENGLISH

To begin your Waterpik® brand shower experience we want to give you all of the proper tools to make installation easy and quick. This way you are that much closer to enjoying an invigorating shower with your new shower head.

You can access more products and information on your product at www.waterpik.com.

Note: pictures depicted may not directly illustrate your shower head.

PRIOR TO INSTALLATION

- Write down your model number in the allotted space above. (model number is found on the packaging near UPC code).

If you do not have the package you may find the model number on our website www.waterpik.com.

- Gather the tools to install the shower head.

Adjustable Wrench (not included)

- Remove old shower head and remove all pipe tape as well.
- Insure that the washer from the old shower is not connected to the pipe. Use a thin utensil to check inside the pipe for washers, such as a pencil or screw driver. **Do not use your fingers.**

- Attach diverter valve by threading clockwise onto shower j-pipe with diverter bracket to the right and 2-way diverter selector knob to the left. Use a wrench to tighten diverter nut to a snug fit. Do not over tighten. Wrap diverter nut with a cloth if you are using pliers.

- Attach fixed mount shower head to front facing threaded connector on diverter. Hand tighten only.

- Locate the hose end with ridged connector and hand tighten to diverter bracket. **IMPORTANT! If hose is not installed in this manner unit will not operate properly.** If hose does not have a ridged connector, connect either end to the diverter bracket and hand tighten.

- Locate the hose end with smooth connector and hand tighten to hand-held shower head. Do not use pliers or wrench to connect hose ends to shower head or diverter bracket.

- Place hand-held shower head in diverter bracket. Point all shower heads away from you and turn on the water full force. Check for leaks. Re-tighten all connections if necessary.

OPERATION:

Spray Selector:
Spray Selector allows you to select from various spray patterns. Spray pattern is controlled by the small lever that rotates left and right.

To change between the hand-held or fixed mount spray, turn the knob on the diverter clockwise or counter clockwise.

WARNINGS:

- To avoid hot water dangers and conserve even more energy, make sure your water heater is set at 120°F (48.9°C) or below.
- Test the tub/shower water with your hand before bathing.
- For additional safety for Ecoflow® or high efficiency shower heads, it is recommended that all homes have installed a pressure balance tub and shower valve with the rotational limit

stops properly set by a plumber. If you are unsure of your valve type consult your plumber.

- For external use only.** The potentially deadly amoeba, *Naegleria fowleri*, may be present in some tap water or unchlorinated well water.
- Always ensure the handheld shower head is properly placed in the bracket, so as to prevent the shower head from falling.
- Do not pull on or tug the flexible hose. This may result in the shower head coming loose and falling.

CARE AND CLEANING

- To maintain proper working conditions cleaning is required when mineral deposits appear on the spray orifices. To clean mineral deposits, gently rub the rubber nozzles on the face of the shower head to dislodge.
- To clean heavier deposits, remove shower head and soak face down in 1-2 cups of white vinegar (use white vinegar only) for about 2-3 hours. Replace shower head and run in each mode to flush out vinegar.
- Do not clean or rinse any part with harsh chemicals, heavy duty cleaners, or abrasives; this may damage parts or finish and will void warranty.

- Clean Filter screen by back flushing to remove particles. Filter screen can be located in one or more of the following ways: located in the handle of the handheld, attached to a rubber washer or in the fixed mount. Follow steps 1-4 under installation to reinstall showerhead.

TROUBLESHOOTING GUIDE

Problem	Solution
No water flow from installed shower head	a Confirm previous shower washer is not in the j-pipe. b Confirm there is only one washer in the pivot ball.
Low water pressure or missing spray patterns	a Clean shower head in vinegar/water solution. (See care & cleaning section). b Clean filter screen.
Leaking at pipe/pivot ball connection	a Confirm only one washer is seated on top of the screen. b Grate bar of soap across the j-pipe threads to act as a sealant.
Diverter spins	a Confirm washer is in diverter nut. b Tighten an additional ¼ to ½ turn.

Vacuum Breaker Backflow Prevention

Note: U.S. plumbing codes for hand-held shower heads in several states and local municipalities require the use of a backflow prevention device. Please contact us at **1-800-525-2774** (U.S. calls only) to obtain a device.

LIMITED LIFETIME WARRANTY

Water Pik, Inc. warrants to the original purchaser of this product that it is free from defects in material and workmanship for as long as the original purchaser owns this product. Water Pik, Inc. will replace any part of the product which in our opinion is defective, provided that the product has not been abused, misused, altered or damaged after purchase. (This includes damage due to use of tools or harsh chemicals.) In the event an item has been discontinued we will replace with what we deem to be the closest product. Water Pik, Inc. is not responsible for labor charges, installation, or other consequential cost. The responsibility of Water Pik, Inc. shall not exceed the original purchase price of the product. This warranty gives you specific legal rights. You may also have other rights that vary where you reside. Save your receipt as proof of purchase is required for warranty action.

Pour que vous puissiez tirer tout l'agrément possible d'une douche avec le système de douche Waterpik®, nous voulons vous permettre de réaliser l'installation aussi facilement et rapidement que possible. Vous pourrez ainsi prendre votre première douche sans délai avec votre nouveau système de douche.

Vous pouvez accéder à plus de produits et d'informations sur votre produit à www.waterpik.com.

Note : Les illustrations incluses peuvent ne pas représenter exactement le produit acheté (douchette).

AVANT L'INSTALLATION

- Inscrire dans l'espace ci-dessus le numéro de modèle du produit (le numéro de modèle du produit figure sur l'emballage, à proximité du code CUP).

Si l'emballage du produit n'est plus disponible, on peut trouver le numéro de modèle du produit sur notre site Internet www.waterpik.com.

- Regrouper les outils nécessaires à l'installation de la douchette.

Clé à molette (non incluse)

- Retirer la douchette existante; éliminer également les résidus de composé d'étanchéité des tuyauteries.
- Veiller à ce que le joint de la douchette existante ne reste pas attaché sur le tube d'alimentation. Utiliser un ustensile mince tel un crayon ou un tournevis pour vérifier qu'aucun joint ne se trouve à l'intérieur du tube d'alimentation. **Ne pas utiliser les doigts.**

INSTALLATION

- Fixer le raccord de déviation en l'enfilant dans le sens horaire sur le tube d'alimentation courbé avec le support du bras de déviation orienté vers la droite et le bouton du bras de déviation à 2 options orienté vers la gauche. À l'aide d'une clé, serrer l'écrou du bras de déviation pour bien l'ajuster. Ne pas trop serrer. Envelopper l'écrou du bras de déviation dans un chiffon si l'on utilise une pince.

- Fixer la douchette à montage fixe sur le raccord fileté du bras de déviation orienté vers l'avant. Serrer uniquement à la main.

- Repérer l'extrémité du tuyau comportant un raccord côtelé et le serrer à la main sur le support du bras de déviation. **IMPORTANT! Si le tuyau n'est pas installé de cette manière, l'appareil ne fonctionnera pas correctement.**

- Si le tuyau ne possède pas de raccord côtelé, raccorder l'autre extrémité au support du bras de déviation et serrer à la main.

- Repérer l'extrémité du tuyau comportant un raccord lisse et le serrer à la main sur la douchette manuelle. Ne pas utiliser de pince ou de clé pour raccorder les extrémités du tuyau à la douchette ou au support du bras de déviation.

- Placer la douchette manuelle dans le support du bras de déviation. Orienter toutes les douchettes loin de soi et ouvrir l'eau à pleine puissance. Vérifier qu'il n'y a pas de fuites. Resserrer tous les raccords au besoin.

UTILISATION DU PRODUIT

Sélecteur du mode d'aspersion :

Le sélecteur du mode d'aspersion permet de choisir l'un des modes d'aspersion disponibles sur la douchette. Le pivotement d'une petite manette (vers la droite ou vers la gauche) permet la sélection du mode d'aspersion.

Pour permuter entre les deux sources d'aspersion (douchette à montage fixe et douchette manuelle), manoeuvrer le bouton du bras de déviation (rotation dans un sens ou dans l'autre)
