

## INSTALLATION

1. Attach shower head to arm by tightening hex nut to a snug fit in a clockwise direction. Using wrench or pliers, tighten an additional  $\frac{1}{4}$  turn.
2. Adjust shower head arm to the desired position by loosening knob.
3. Test for leaks and tighten connections as needed.

## WARNING:

- 1 To avoid hot water dangers and conserve even more energy, make sure your water heater is set at 120°F (48.9°C) or below.
- 2 Test the tub/shower water with your hand before bathing.
- 3 For additional safety it is recommended that all homes have installed a pressure balance tub and shower valve with the rotational limit stops properly set by a plumber.
- 4 **For external use only.** The potentially deadly amoeba, *Naegleria fowleri*, may be present in some tap water or unchlorinated well water.

## CARE AND CLEANING

- To clean heavier deposits, remove shower head and soak face down in 1-2 cups of white vinegar (use white vinegar only) for about 2-3 hours. Replace shower head and run in each mode to flush out vinegar.
- Do not clean or rinse any part with harsh chemicals, heavy duty cleaners, or abrasives; this may damage parts or finish and may void warranty.

## TROUBLESHOOTING GUIDE

Problem	Solution
Low water pressure or missing spray patterns.	a Clean shower head in white vinegar solution. (See care & cleaning section).
Leaking at pipe pivot ball connection.	a Confirm black restrictor is seated dome side up in hex nut. b Grate bar of soap across the j-pipe threads to act as a sealant.
