### INCLUDED SHOWER COMPONENTS

### SHOWER HEAD INSTALLATION

### To loosen/tighten shower head holder:

Remove magnetic bracket from slide strip. On the back of the bracket, there is a slot to loosen or tighten the pivot ball. You can do this using a coin or a large bladed screwdriver. To loosen turn the slot counter clockwise, and to tighten turn the slot clockwise.

### SLIDE STRIP REMOVAL

To access a video on how to uninstall the slide strip go to: [www.waterpik.com/InstallSlide](http://www.waterpik.com/InstallSlide)

**Removal Tools:** Masking tape, standard plastic or metal putty knife, or a tile trowel, available at most hardware stores.

### ENGLISH

Thank you for purchasing this Waterpik® shower head. This booklet will give you the proper tools and information to make installation easy and quick. You are close to enjoying a powerful and invigorating shower experience.

You can view more information about Waterpik® shower head products at [www.waterpik.com](http://www.waterpik.com).

#### Access an Instructional Video Online

For this model we have created installation videos that are available online. You can access them at our website [www.waterpik.com](http://www.waterpik.com) or go to the following link:

[www.waterpik.com/InstallSlide](http://www.waterpik.com/InstallSlide)

**Note:** All pictures and images depicted in the videos and this manual may not directly illustrate your shower head.

**WARNING:** Pacemakers and similar implanted medical devices may be affected by magnetic bracket.

### SLIDE STRIP INSTALLATION

1. Use the template provided in the box to locate the desired location of the slide strip next to your J-pipe.

• Tape the template vertically to your wall with masking tape or duct tape.

#### Placement Recommendations

• Install to the right or left of j-pipe so the hose isn't in the way during use.

• Do not install directly under j-pipe.

• Placement height will depend on household members' height.

• To check alignment and height, hold up shower head to strip to confirm that is your desired position. The adhesive pads allow for one time use and cannot be repositioned so it's important to use the template.

**Note:** to ensure proper alignment of the slide strip, a level can be used. If you have shower tiles, you can use the lines

of the tile to properly align with gridlines on the template.

2. Once you have confirmed your slide strip position, use the pre-adhesive wipe to clean the area inside the template. Let the area dry for one minute. Once it is dry, peel off burgundy color tape backing from the adhesive pads. Place the slide strip (with adhesive exposed) inside of the template and apply pressure with your hands for 20 seconds. Remove template. If possible and for best results, do not use shower for 24 hours (minimum 12 hours).

#### Wipe Use:

- Avoid contact with eyes.
- Wash hands thoroughly after using.

### PRIOR TO INSTALLATION

- Make sure wall is clean and dry.
- No tools are necessary but a level can be used to ensure proper alignment.
- Remove old shower head and remove all pipe tape.
- Make sure that the washer from the old shower is not connected to the pipe. Use a thin utensil to check inside the pipe for washers, like a pencil or screw driver. **Do not use your fingers.**
- An extra adhesive pad is included if needed.

**Note:** The slide strip requires 12 – 24 hours to fully adhere to the wall.

**VERY IMPORTANT!** The slide adhesive pads will only stick to the wall once. Do not attempt to reposition it multiple times. It allows for a one time use.

Do not remove backings from back of the slide adhesive pads until you have used template to find desired position. Do not touch the adhesive on the back of the pads because the oil on your fingers will decrease effectiveness of the adhesive.

### OPERATION

#### Hand Held Spray Selector:

Spray patterns for the hand held shower head are controlled by the small lever that rotates the shower face to the left or right.

#### To slide position of shower head:

The easiest way to move the shower head is to grasp the bracket at the base of the shower head and lift to release the magnet from the slide. Hold bracket at an angle while you slide up or down to adjust height.

### Vacuum Breaker Backflow Prevention

**Note:** U.S. plumbing codes for hand held shower heads in several states and local municipalities require the use of a backflow prevention device. Please contact us at **1-800-525-2774** (U.S. calls only) to obtain a device. Monday – Friday, 7:00 AM – 5:00 PM MST. English only.

### TROUBLESHOOTING GUIDE

Problem	Solution
No water flow from the shower head.	a Confirm previous shower washer is not in the j-pipe or diverter. b Check both hose ends to clear any blockage.
Low water pressure or missing spray patterns.	a Clean shower head in vinegar/water solution. (See care & cleaning section). b Tightly secure hose conical.
Leaking at j-pipe/hose connection.	a Confirm washer full seated in hose conical. b Tightly secure hose conical.

### WARNING:

1 **Magnetic field:** Pacemakers and similar implanted medical devices may be affected by magnetic bracket.

2 **Strong magnet:** Do not place fingers between magnetic bracket and slide strip to avoid pinching injury.

3 To avoid hot water dangers and conserve even more energy, make sure your water heater is set at 48.9°C / 120°F or below.

4 Test the tub/shower water with your hand before bathing.

5 For additional safety for Ecoflow® or high efficiency shower heads, it is recommended that all homes have installed a pressure balance tub and shower valve with the rotational limit stops properly set by a plumber.

6 **For external use only.** The potentially deadly amoeba, *Naegleria fowleri*, may be present in some tap water or unchlorinated well water.

7 Do not pull on or tug the flexible hose. This may result in the shower head coming loose and falling.

8 Never attempt to use the shower head as a handle, railing, or otherwise for support. The shower head is not designed to support your weight and serious injury can result!

### CARE AND CLEANING

• To maintain proper working conditions cleaning is required when mineral deposits appear on spray orifices. To clean mineral deposits, gently rub nozzles on face of shower head to dislodge.

• To clean heavier deposits, remove shower head and soak face down in 1-2 cups of white vinegar (use white vinegar only) for about 2-3 hours. Replace shower head and run in each mode to flush out vinegar.

• Do not clean or rinse any part with harsh chemicals, heavy duty cleaners, or abrasives; this may damage parts or finish and void warranty.

### LIMITED LIFETIME WARRANTY

**Save your receipt as proof of purchase is required for warranty action.** Water Pik, Inc. warrants to the original purchaser of this product that it is free from defects in material and workmanship for as long as the original purchaser owns this product. Water Pik, Inc. will replace any part of the product which in our opinion is defective, provided that the product has not been abused, misused, altered or damaged after purchase. (This includes damage due to use of tools or harsh chemicals.) In the event an item has been discontinued we will replace with what we deem to be the closest product. Water Pik, Inc. is not responsible for labor charges, installation, or other consequential cost. The responsibility of Water Pik, Inc.

shall not exceed the original purchase price of the product. This warranty gives you specific legal rights. You may also have other rights that vary where you reside.

### ÉLÉMENTS DE LA DOUCHE COMPRIS

### INSTALLATION DE LA BARRE DE COULISSEMENT

1. Utiliser le gabarit fourni dans la boîte pour déterminer le positionnement souhaité de la barre de coulissement, à côté du tube d'alimentation en « J ».

• À l'aide de ruban de masquage ou à conduits, fixer le gabarit sur le mur à la verticale.

#### Recommandations concernant le positionnement

• Installer à droite ou à gauche du tube d'alimentation en « J », de sorte à ne pas être gêné par le flexible de douche lorsque l'on prend sa douche.

- Ne pas installer juste au-dessous du tube d'alimentation en « J ».
- La hauteur d'installation dépend de la taille des membres de la famille.
- Pour vérifier l'alignement et la hauteur, positionner la douchette sur la barre en la maintenant avec la main pour vérifier que la position est satisfaisante. Les tampons adhésifs ne peuvent être utilisés qu'une seule fois et ne peuvent pas être repositionnés; il est donc important d'utiliser le gabarit.

**Remarque :** Pour s'assurer que la barre de coulissement est bien alignée, il est possible d'utiliser un niveau. Si la douche est carrelée, il est alors possible d'utiliser les lignes du carrelage pour un alignement correct avec les lignes du quadrillage du gabarit.

2. Une fois la position de la barre de coulissement déterminée et avant de faire adhérer la barre sur le mur, utiliser la lingette fournie pour nettoyer la surface du mur apparente à l'intérieur du gabarit. Laisser la surface sécher pendant une minute. Une fois sèche, retirer la pellicule protectrice rouge bordeaux à l'arrière des tampons adhésifs. Placer la barre (côté adhésif, sans pellicule protectrice, orienté vers le mur) à l'intérieur du gabarit, puis exercer une pression avec les mains pendant 20 secondes. Enlever le gabarit. Si cela est possible, pour de meilleurs résultats, ne pas utiliser la douche pendant 24 heures (minimum 12 heures).

### Utilisation de la lingette

- Éviter tout contact avec les yeux.
- Se laver soigneusement les mains après usage.

### INSTALLATION DE LA DOUCHETTE

1. Visser le flexible de douche sur le tube d'alimentation en « J ».

2. Visser l'autre extrémité du flexible sur la douchette.

3. Placer le support magnétique sur la barre de coulissement.

4. Mettre le manche de la douchette dans le support.

### Douchette installée

### FONCTIONNEMENT

#### Sélection du mode d'aspersion de la douchette manuelle :

Sur la douchette manuelle, le mode d'aspersion est sélectionné par la petite manette qui fait pivoter le disque frontal vers la droite ou vers la gauche.

#### Pour repositionner la douchette en la faisant glisser :

Le moyen le plus facile de repositionner la douchette est de saisir le support à la base de la douchette et de soulever pour dégager l'aimant de la barre de coulissement. Maintenir le support incliné tout en faisant glisser vers le haut ou vers le bas pour régler la hauteur.
